

Bi-Weekly Update February 27, 2008 GT1261 TSX Comp 13797 DJII 12685

TSX Composite Index

The intermediate stock cycle is about 20 weeks as measured from trough to trough

The bull skew is about 12 weeks and the bear skew is about 8 weeks

Our current intermediate cycle is currently 3-weeks old – giving us a time target of late April 2008 for an intermediate cycle top price target at the November peak of 2007

This could well be the only powerful advance in 2008 - see rotation table's p2
